"Evidence for proteolytic cleavage of the 120-kilodalton outer
membrane protein of rickettsiae: identification of an avirulent
mutant deficient in processing.";
Infect. Immun. 60:159-165(1992).
-I- FUNCTION: THE 120 KDA SURFACE-EXPOSED PROTEIN IS A MAJOR
STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETTSIAL
VIRULENCE FACTOR AND/OR IMMUNOGEN DURING INFECTION.
-I- FUNCTION: THE 32 KDA BETA PEPTIDE MAY SERVE AS A MEMBRANE AN
-I- SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED B
S-LAYER WITH HEXAGONAL SYMMETRY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             762
                FUNCTION: SEEMS TO BE INVOLVED IN THE CORRECT TIMING OF CELL SEPARATION AFTER CYTOKINESIS, AS SEPARATION OF MUTANT DAUGHTER CELLS IS DELAYED. COULD EITHER BE AN ENZYME NECESSARY FOR GLOCANS-DEGRADATION OF THE CELL WALL AT THE NECK REGION BETWEEN MOTHER AND DAUGHTER CELLS OR A REGULATORY PROTEIN CONTROLLING THIS METABOLIC STEP. EXCLUSIVELY EXPRESSED BETWEEN THE END OF MITOSIS AND EARLY G1; INACTIVATED BEFORE CELLS PASS START.
                                                                                                                                                                   Cell.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
